

BRIDGING SLEEVES

Allan Edwards offers custom-made bridging sleeves to reinforce raised features on a pipeline such as girth welds, small wrinkle bends or buckles. Available for any pipe size, bridging sleeves are rolled and formed from ASTM-grade structural quality steel plate to create two 180° halves that encircle the pipe. For additional details, please contact Allan Edwards.

It is recommended to offset the oversleeve/bridging sleeve slightly to avoid welding over an existing weld seam.

Bridging Sleeve Dimensions

REGULAR SLEEVE	OVERSLEEVE (BRIDGING) O.D	WALL THICKNESS	REGULAR SLEEVE	OVERSLEEVE (BRIDGING) O.D	WALL THICKNESS
