

# CONCRETE COATING

**Allan Edwards concrete coating provides operators with a two-for-one solution without the extra hassle.** Simultaneously serving as a buoyancy control weight while adding an additional layer of protection to the pipe, concrete coating acts as a stabilizing force in wetland applications such as flood plains, river crossings or areas with high water tables. Our concrete coating is a complete end-to-end solution: whether we pour the coating remotely and ship it to you or manufacture it on-site, we're there every step of the way.

**Concrete coating - providing stability and protection to maximize your pipeline assets.**

## Concrete Coating Features & Advantages:

- Dual purpose: serves both as buoyancy weight & protective layer
- Concrete thickness ranges from 1-12"
- Customizable to multiple pipe diameters
- Stabilizes pipe in flowing water or at water crossings
- Coating manufactured either on-site or remotely
