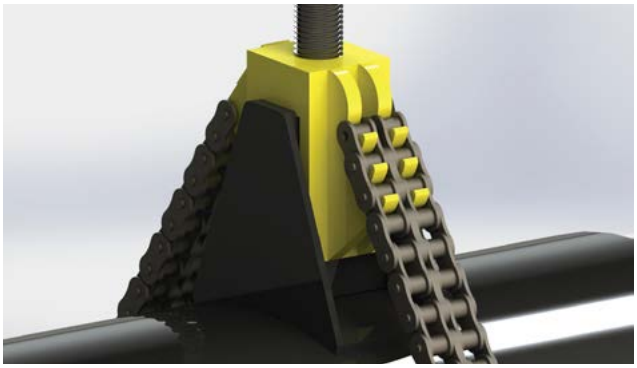
Manual Pipe Jack

The Manual Pipe Jack is a roller chain clamping system for Type A/B steel repair sleeves, hot tap tees, reinforcing pads and stopple fittings. One jack will fit multiple pipe sizes by adding to or subtracting from the main roller chain. Its design eliminates the need for hammering on the sleeve, preventing marring of the sleeve surface and ensuring a more consistent weld gap for a superior installation. *For additional details, please contact Allan Edwards, Inc.*



Manual Pipe Jack Ordering Information

Part Number	Clamp W/Chain Kit	Pipe Jack With Chain Weights
PJ-620	6-20" OD	68
PJ-636	6-36" OD	87
